

We are looking for...

A Biomanufacturing Technician

As a biomanufacturing technician at BIOHM you will be a key member of our product making process; taking on a role in our London bio-manufacturing team, as we deliver on a variety of projects and scale up our operations. This is a hands on role, which requires an experienced and technical maker. As BIOHM continues to challenge perceptions and inspire change in industry we are looking to expand our team of bio-neers with a new permanent team member, who thrives through embracing problem solving and change, whilst contributing to the development of new production methods and processes.

What you need to be great at...

Proactive problem solver | Creative and engaged in coming up with solutions and ideas on how to improve machinery, production lines and procedures. Be able to apply analytical thinking to troubleshoot and resolve production issues when required.

Organised and forward thinking | Outstanding time management skills, to manage workload to achieve efficient outcomes. Demonstrate your ability to work independently to a production schedule whilst adhering to all safety guidelines, standards and material handling instructions in the facility.

Confident maker | Confident using machinery and tools which may range from drilling, angle grinding, milling, heat pressing, compression molding, injection, extrusion, CNC machining, etc., machinery and tooling. Further training will also be provided.

Bio-based/Natural Material Enthusiast | Preferably with past experience in working with natural / bio-based materials and be competent in understanding their qualities and behavior when exposed to different environments.

Climate Action Champion | Passionate about taking immediate action to address our climate crisis and determined to make significant impact

Compulsive co-operator | Not afraid to ask for help or consult team members; able to involve, engage and lead other team members; able to communicate technical details and progress in a succinct and clear way; patient and gentle whilst explaining concepts and processes to people with different expertise.

Relaxed and optimistic | Realistic and honest about not knowing something; confident in your decisions but able to learn from failure; motivated and determined to always try again.

Your work will require...

Ownership | Become an integral and trusted member of the team; take extreme ownership of your work and for the deliverables produced by your team. Demonstrate an exceptional attention to detail and a passion for producing high-quality & dependable work.

Getting stuff done | Support the Innovation team by advising on production processes whilst executing and delivering on projects as they arise.

Teamwork | Working in a team of passionate people that want to change the world is a great opportunity to make an impactful contribution; ask great questions, and learn from others.

What you will be doing...

Material production | Efficiently operate factory equipment and manage the process as a whole. Take ownership of the entire making process from processing by-products, measuring, grading and feeding batches of raw material into production machinery to applying finishing touches. Ensure the materials are fully inspected, check for defects and be able to identify and distinguish between colors and textures. Make sure all products delivered to our clients are fabricated and finished to the highest standards. Assist in the packing and shipment of items.

Manufacturing | Use your knowledge and expertise to assist and advise the Product Development team giving feedback on manufacturing process to optimise the production capability.

Production planning | Work closely with the Innovation and Project Management teams in order to accurately plan the workload and operating capacity of the facility to meet the production and schedule requirements. Prepare production documents such as standard operating procedures, manufacturing batch records, inventory reports and productivity reports.

Equipment maintenance | Ensure all machinery runs smoothly and tools and equipment are in excellent working condition, perform repairing works and cleaning tasks where required. Frequently monitor the production process and carry out basic testing and quality checks.

Production development | Monitor and adjust production processes or equipment for the optimum quality and productivity. Advice on new machinery and production methodology. Apply a rigorous approach when developing processes so that they comply with high environmental standards.

Salary | £20-25K (experience dependent)

Location | London, UK      Start Date | July - September 2021

Permanent | Full-time

We want (you) to join (y)our revolution!
